

ENZYMATIC ORIGIN & MYCOPLASMA FREE STATEMENT

Uridine GMP

Uridine, Bio Excipient Grade manufactured by BioSpectra has been evaluated for the source of the raw materials used in its production through the Supplier Qualification Program. Uridine, Bio Excipient Grade and its raw materials are not derived from materials of plant or animal origin. The enzyme utilized in the synthesis of the Uridine raw material supplied to BioSpectra is produced by bacterium fermentation. Specific steps in the synthesis and manufacturing process include heating above 65°C for longer than 10 minutes and less than 0.1-micron ultrafiltration. The raw material is further processed, and purified using multistep purification through BioSpectra's validated GMP manufacturing process. BioSpectra does not specifically analyze Uridine, Bio Excipient Grade manufactured by BioSpectra for mycoplasma and based on the manufacturing process can confirm that Uridine, Bio Excipient Grade, does not contain mycoplasma.

Current Product Number
URID-3250
